

Tooan Zhan Goo

Automation Engineer | Transitioning into AI Workflow & Agent Engineering

Kuala Lumpur, Malaysia • zhanmanagement@gmail.com • linkedin.com/in/blue109 • github.com/blue109

PROFESSIONAL SUMMARY

Automation Engineer with 5+ years scripting web and mobile test automation across fintech, capital markets, and banking. Proficient in Playwright (JS), Java/Selenium, BDD/Cucumber, and XPath-driven POM with data-driven testing. Transitioning toward AI workflow engineering — with growing knowledge in agent design, skill scripting, and LLM tooling through active self-directed projects and upskilling.

CORE COMPETENCIES

Test Automation	Frameworks	Fintech Domain	Growing: AI Skills*
Playwright / JS	BDD / Cucumber	Capital Markets	Agent Design Concepts
Java / Selenium	Page Object Model	Wealth Management	LLM Tooling (Claude)
Mobile Automation	Data-driven Testing	Banking / RPP	Workflow Diagramming
XPath / Locators	Postman / API Tests	Insurance Workflows	AI-Assisted Scripting

* Growing: AI Skills = conceptual knowledge + personal projects. Not yet applied professionally.

PROFESSIONAL EXPERIENCE

Automation Engineer — Accenture • Kuala Lumpur, Hybrid • May 2025 – Present (1 yr 2 mos)

- Architect and develop automation scripts to eliminate manual workflows, owning full delivery from requirement analysis through to deployment.
- Script web and mobile automation in Playwright (JS) / Cucumber BDD / POM — identifying XPath locators, validating DDT values, and maintaining test suites.
- Build and maintain Android automation for 6 insurance app modules: Create Lead, Need Analysis, IRPQ, SI, E-App, and Submission Checklist.
- Manage weekly stakeholder progress reports independently — translating technical delivery into plain-language summaries with screen recordings.

QA Automation Engineer — Phillip Capital Inc. • Kuala Lumpur, Hybrid • Dec 2022 – May 2025 (2 yrs 6 mos)

- Hands-on exposure to capital markets — live trading systems, order flows, and wealth management operations in a real fintech environment.
- Built API automation suites (Postman, Cucumber) for trade execution, portfolio management, and KYC compliance; designed data-driven scripts against real-market PayNet data.
- Collaborated with developers and product managers across release cycles for a high-stakes trading platform with direct real-money user impact.

Associate QA Analyst — Hitachi eBworx • Jan 2021 – Dec 2022 (2 yrs)

- Wrote test scripts and provided QA support for a banking RPP (Retail Payment Platform) system for the banking industry.
- Conducted functional and regression testing across payment workflows; collaborated with bank stakeholders through to successful go-live sign-off.

EDUCATION

Bachelor's Degree — Enterprise Information System, Information Technology

Tunku Abdul Rahman University of Management and Technology (TARUMT), Malaysia

PERSONAL PROJECTS (SELF-INITIATED, OUTSIDE WORK)

Investment Portfolio Dashboard — Browser-based dashboard consolidating 42 stock positions across two brokerage accounts (MYR Universal + SGD Margin) into a single USD view. Built entirely in HTML, CSS, and vanilla JavaScript with Chart.js powering interactive sector allocation and upside/downside charts. Implements a blended fair-value methodology: analyst consensus target, Benjamin Graham's intrinsic value formula, and forward P/E valuation — with colour-coded badges to surface undervalued positions at a glance. Supports filtering by account or valuation status with sortable columns. Replaced manual spreadsheet tracking with a clean, single-file, no-backend tool for data-driven investment decisions.

CardWise — Android credit card payment tracker (React Native / Expo) with a six-tier smart notification system designed around billing cycle awareness and a home screen widget for at-a-glance payment status. Built end-to-end using AI-assisted development, from UI design through to EAS Build deployment as a standalone APK.

Actively transitioning toward AI Automation, Workflow Engineering, and Agent-based roles — fintech domain preferred.
